

As Canver İş Makinaları, in the activities we started to create a brand in the field of Construction Equipment Attachments; our goal by our experienced and trained project department is to create designs that belong to us and to ensure that these designs are constantly developed and produced. We also work on the vehicles you intend to modify according to the current attachment, equipment and working conditions and put them into service.

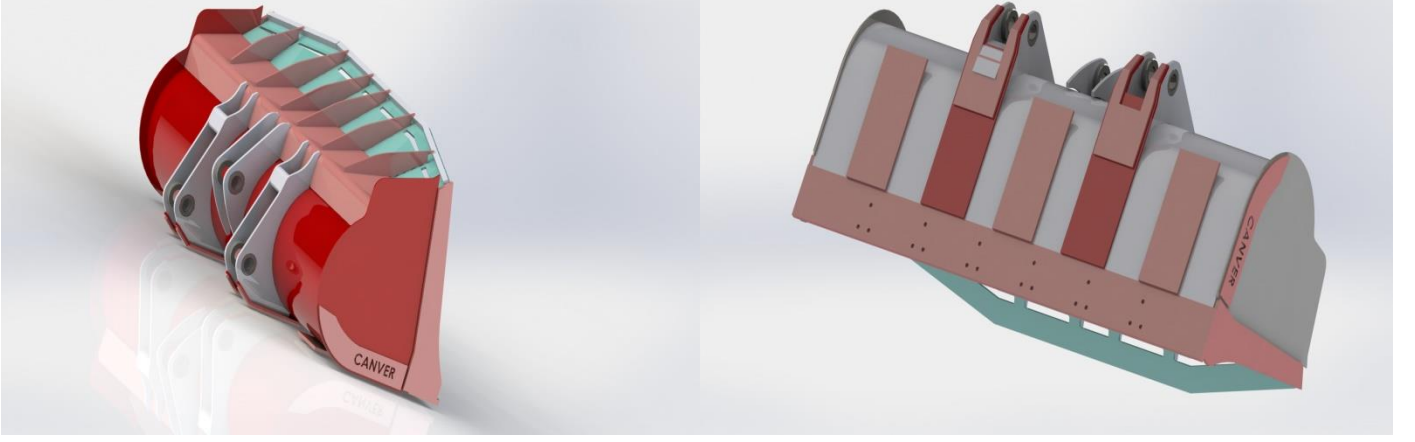

After the alternative draft studies oriented to the design of the connection dimensions reference area design of the machine to which the attaching machine will be installed, the production drawings are prepared according to the production processes modeled in computer design program and to the parts. The production discipline thus obtained enables the design to be produced in accordance with the work flow and production technique. Our efforts to ensure that the products we design are quality products based on technical and experience are to facilitate the work flow of our customers and to satisfy them.

## EXCAVATOR BUCKETS

## LOADER BUCKETS

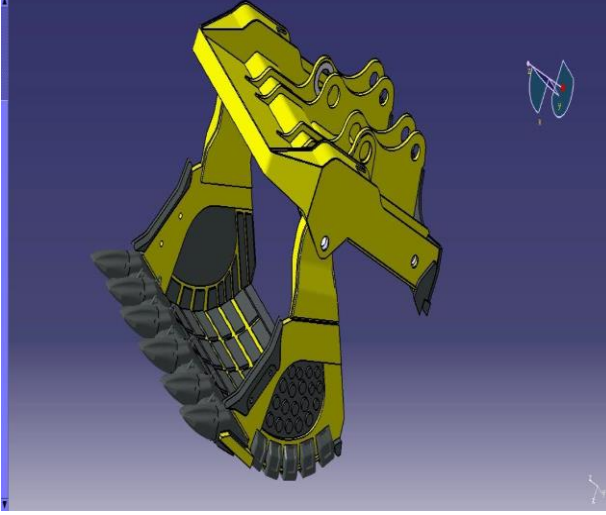

### BOOM AND ARM (STANDARD AND HIGH ACCESS)

We develop and manufacture our designs for the production of components such as boom and arm which have critical operating values, play an important role in power transmission and control and which are directly related to machine efficiency. We ensure that you work continue without interruption by the compatibility of the components which we design and produce according to the analysis. In addition, we design and manufacture Special Purpose Arm Groups that enable your machine to perform all kinds of special and accelerated works.

## SHOVEL BUCKETS

## MARBLE LOADER

We design and produce Marble Attachments as a set with quick coupling equipment and bucket with lifting capacity from 20 tons to 60 tons considering the machine class in marble quarries. We also produce single loader on request.

### QUICK COUPLER

We manufacture all kinds of Quick Coupler (excavator, loader, forklift, etc.) which is used for quick attachment and equipment change with your excavator or loader machines in the work area by using the most appropriate system according to your usage and your needs.

### LOG ATTACHMENT

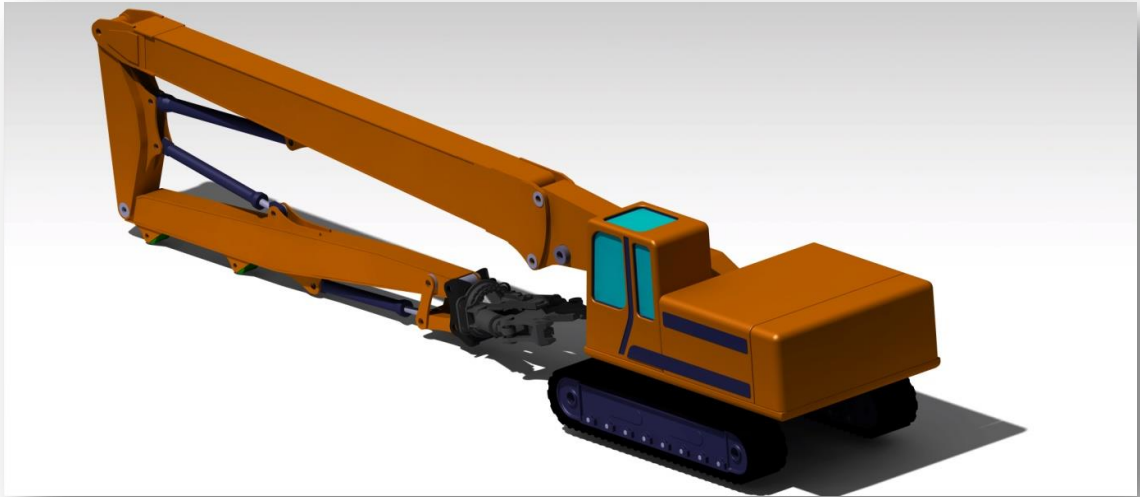

We design and produce log attachment with or without ejector for loader, excavator and sennebogen class machines considering the performance of your machine in the capacity and dimensions you need.

### DEMOLITION MACHINE (HIGH ACCESS)

We design excavators and turn them into demolition vehicles for different situations. We determine the working intervals according to the features of the machine and put them into service as a demolition machine including additional counter weight, cabin conversion, cabin lifting and camera system installation.

## RAILWAY MAINTENANCE MACHINES

Traverse Replacement and Placement Attachments needed for the construction of railways. We design and manufacture Hydraulic Axles that enable wheeled excavators and trucks to go on track.

### GRAB BUCKET/CLAMSHELL VE POLYP GRAB ATTACHMENT

According to working conditions and user requirements, we design and produce hydraulic and mechanical shapes as open, half open, closed foot; according to the number of feet, with and without rotation, for the usage in ports, cranes, scrap field, block rock transportations.

### WHEEL DISMANTLING ATTACHMENT

Wheel Dismantling Attachment designed especially for the solution of the difficulties experienced in the dismantling, modification and replacement of large tires in the field conditions can be connected to your cranes, loaders and forklifts.

### PEDESTAL BOOM SYSTEM-MANIPULATOR

We design hydraulic and remote controlled boom systems that you need in crushing and screening plants, quarries, back or front of tractors, Bobcat-style machines or block transportation from a fixed place and put them into service for you.

### DEMOLITION SHHEARS (PULVERIZER)

We provide mechanical and hydraulically grinder and shears system according to your needs with ease of use in building demolitions, breakage of railway sleepers, dismantling of steel buildings and cutting of scrap metal.
